

Grade form for the Industrial Sponsor

Students are made aware that you are the primary stakeholder in this project and will be providing a portion of the grade.

Name: _____

Date: _____

Organization: _____

Please note that this is an evaluation of the merit and quality of the student's Product. The team members (individually and as a team) are given ample opportunity to earn points for their effort, dedication, and hard work in other evaluations throughout the semester. Your grade here should reflect the completeness and craftsmanship of their end product, and the achievement of (or progress towards) project goals. It should not be based on teamwork or effort.

From the Auburn Creed:

"I believe that this is a practical world and that I can count only on what I earn" (Evaluated by you, the reviewer) "Therefore, I believe in work, hard work" (Evaluated by the course instructor at another time)

Grade the students based on the following scale:

A 90-100 Outstanding, exceeds goals, demonstrates skilled craftsmanship and ingenuity.

B 80-89 Good, provides all required deliverables, system/product is reliable and functional thanks to solid design.

C 70-79 Acceptable, meets most goals, engineering tools and principles were used but the system/product has some features which were hastily made which weaken the product's potential

D 60-69 Unacceptable, system/product does not demonstrate engineering principles nor meet stated project deliverables and objectives. If time allows, the project should be restarted from scratch.

My grade for the student team is: _____

Any Comments:
