

L^AT_EX Homework: Spaces, Lengths and Boxes

Due: 07/09/2010

Exercise 1: Recreate and modify the first compound box example from the Spaces, Lengths, and Boxes presentation so that it appears as close as possible to the following (with enclosing border):

Hints: Start with the L^AT_EX code right from the presentation. You may need to try several different methods of centering structures. Consider `\center` and `\center{}`. Think about framing a `\parbox` with a `\frame{}` structure.

Exercise 2: Create some horizontal spacing of four headings as below such that the first heading is all the way to the left, the second heading is one-fourth the way from the left margin toward the right margin, the third is three-fourths the way from the left margin to the right margin, and the fourth is all the way to the right:

One

Two

Three

Four
