Graphics in \LaTeX Exercise

July 16, 2010

Create a document with two figures, references to those figures, and a list of figures (included with the \texttt{\textbackslash listoffigures} command).

- The first figure should have a long caption below the figure and a short description in the list of figures. (Hint: use the command \texttt{\textbackslash caption\{short description\}\{long caption text\}})

- The second figure should contain at least two subfigures. (Hint: load the \texttt{caption} and \texttt{subcaption} packages, then use the \texttt{subfigure} environment within an normal \texttt{figure} environment)

- Include a sentence or two that references the figures with the \texttt{\textbackslash ref} and \texttt{\subref} commands.
