(MRP) Materials Resource Planner - Wind

Position Information

Employer: GE Energy - Wind Energy [view profile]

Division: GE Energy

Title: (MRP) Materials Resource Planner - Wind

Description: BASIC QUALIFICATIONS

- BS degree in Engineering or Supply Chain Management. Minimum GPA: 3.0
- U.S. citizen or permanent resident.

RESPONSIBILITIES

This position provides an opportunity to drive on-time delivery of materials of multiple sites. The position also takes ownership of Material Inventory levels, including obsolete and current excess. In this position, the employee will interface with demand management, shop scheduling, fulfillment team, configuration control, supply sources, and other organizations as required. Tasks include but are not limited to the following:

- Monitor supply and demand misalignment, and collaborate with manufacturing sources to implement corrective action plans.
- Release material plan requirements to manufacturing sources.
- Identify and react to material plans that do not meet customer requirements.
- Execute planning and scheduling activities for assigned part numbers using COPICS planning system.
- Analyze data to determine opportunities to decrease inventory, reduce total costs and improve Customer Service levels.

DESIRED

- Ability to manage multiple tasks and establish effective work priorities.
- Ability to work effectively with individuals across diverse organizations.
- High attention to detail and accuracy.
- Ability to bring assignments to successful completion.
- Effective communication skills for written and oral presentations.

GENERAL

GE Energy's wind turbine business located in Pensacola, Florida is one of GE's Imagination Breakthrough growth platforms. The business and technology challenges will provide strong professional growth opportunities and a dynamic innovative environment. Individuals seeking a small company environment inside the bigger GE will thrive in this diverse environment.

GE is an equal opportunity employer
