

CodeWarrior for HC12 v4.6 Installation Procedures for Windows Vista Business

This is the installation procedure for CodeWarrior for HC12 V4.6 on Windows Vista Business. By deselecting the P&E drivers, which are currently not supported and do not work under Windows Vista, a user can proceed with installation and use of the SofTec and Turbo BDM Light drivers.

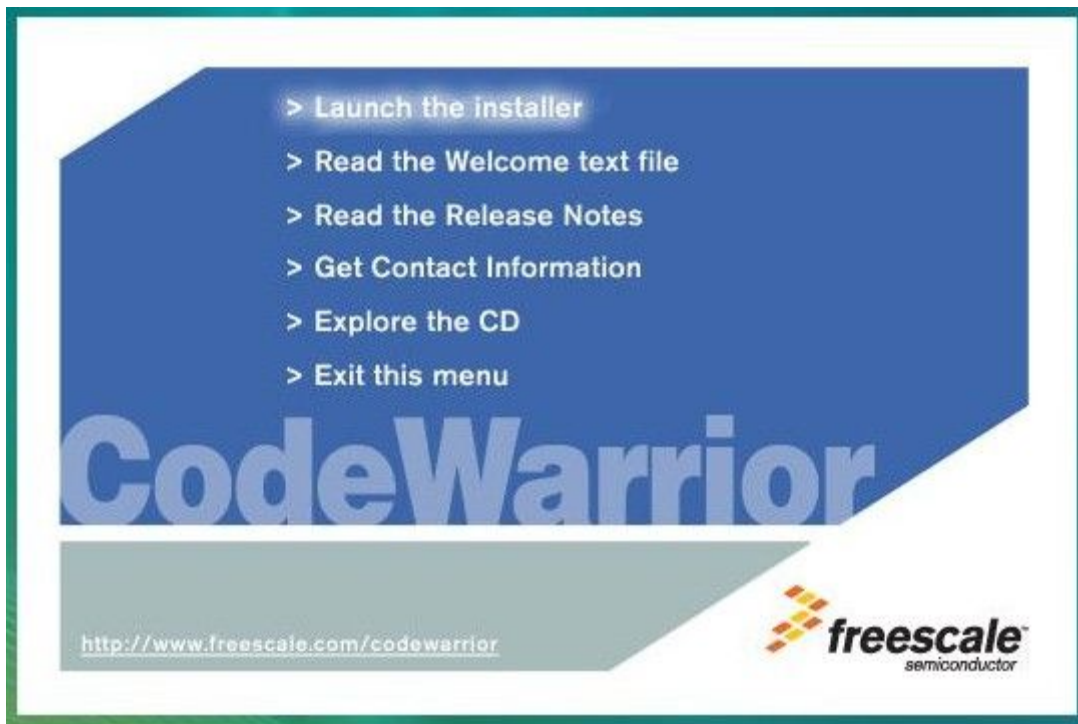

IMPORTANT:

Certain silicon releases (eg: M68HC812A4) are not supported by the SofTec and Turbo BDM Light drivers so simply being able to install is not a guarantee that all silicon can be targeted using these drivers.

These instructions apply to the 32-bit variant of Windows Vista Business. 64-bit is completely untested and unsupported at the time that this document was written.

Steps to Install:

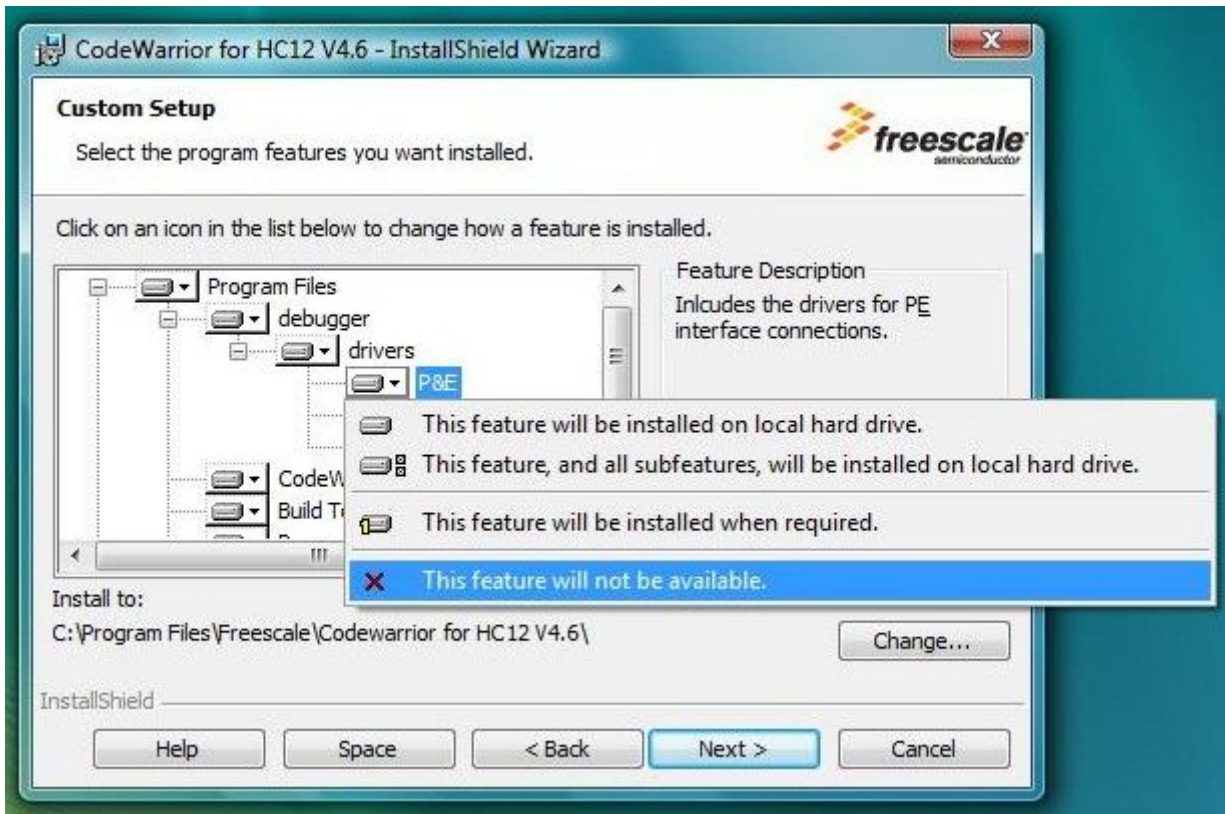

1. Launch the Installer

2. Select Custom install

3. Expand the "Program Files -> debugger -> drivers" group and right-click on P&E.

4. Select "This feature will not be available" and click the "Next" button.
