

Graphics in L^AT_EX Exercise

July 16, 2010

Create a document with two figures, references to those figures, and a list of figures (included with the `\listoffigures` command).

- The first figure should have a long caption below the figure and a short description in the list of figures. (Hint: use the command `\caption[short description]{long caption text}`)
- The second figure should contain at least two subfigures. (Hint: load the `caption` and `subcaption` packages, then use the `subfigure` environment within an normal `figure` environment)
- Include a sentence or two that references the figures with the `\ref` and `\subref` commands.
